Subject: LEE, LILY has shared 'Investigation of Anomalous Soil Samples at HPNS'

Here is the entire report that Tetra Tech EC wrote in 2014 that describes its internal investigation into anomalous soil samples. It describes the resampling it did under Navy oversight and findings that 5 areas needed more remediation. I want to make sure you have it handy for comparison with North Pier. I separately emailed you just the North Pier excerpts. But this is the whole report in case it helps for context.
